

ELEVANCE SKILLS

"Real World Experience That Builds Real Careers"

At Elevance Skills, we enable students to gain practical, industry-ready education through real-time, project-based learning.

Our programs help learners work on actual industry-style projects, ensuring they gain the skills, exposure, and confidence required to excel in the modern tech ecosystem.

We strengthen the bridge between knowledge and application, preparing students to meet real-world expectations from day one.

ELEVANCE SKILLS TECHNOLOGY PRIVATE LIMITED

Registration Number - 33AAICN0803F1ZZ

Launch Your Career with ElevanceSkills

Build Real Projects from Day One

Start your journey with hands-on, industry-style projects from the very first day. Work on exciting real-world websites like: Stack Overflow, YouTube, Twitter, Internshala, RedBus, Book My Show, Make My Trip, Jira SAAS, Myntra, Cars 24. Get pre-recorded training videos, complete source code, daily live sessions and lifetime access to all learning materials. Track your progress online all the way to 100% completion.

Turn Knowledge into Real Experience

Transition smoothly into an industry internship. Apply your training skills in client-like projects and solve real-world challenges. Build confidence as you develop, test, and deploy projects like a professional.

An Internship That Adapts to You

Just 3 hours/day, 5 days a week.
Duration: 1 to 6 months (you decide).
Flexible hours—balance with classes and personal schedule.

Get Paid to Prove Your Skills

Receive a guaranteed ₹3000 stipend on completing tasks.

Earn more by:

- Taking additional projects
- Delivering outstanding work
- Completing tasks ahead of deadlines

Guidance That Builds Independence

Mentors show you the way, not the answers.
Learn to solve like an industry professional.
For queries, email us on **training@elevanceskills.com** or connect via our support group.

Certificates That Open Doors

Earn an authorized Training Certificate.
Get an Internship Completion Certificate + Letter of Recommendation (LOR) for exceptional work.
Strengthen your LinkedIn, GitHub, and CV with verified credentials.

Why Students Trust ElevanceSkills

Real-world projects, not dummy assignments

- Industry exposure before graduation
- Job-ready skills recruiters want
- Opportunity to earn while you learn

Take a Step For Your Future with Just Rs 497 (Training Fee)

Accelerate your career with an opportunity designed for committed learners.

Standard Training Fee: ₹997

Shortlisted Candidate Fee: ₹497 only

**Explore the complete structure,
features, and learning
components of each project.
Everything you need to
understand the workflow,
technologies, and outcomes
is outlined below.**

STACK OVERFLOW

- HTML, CSS, JavaScript basics
- ReactJS components, hooks & UI building
- Redux & Redux Thunk for state management
- Axios for frontend-backend communication
- Node.js & Express.js backend development
- MongoDB + Mongoose
- CRUD operations
- JWT authentication & security
- Cloud basics & database deployment
- WebSockets for real-time features
- Git & GitHub version control
- bcrypt & Helmet for backend security hardening
- Netlify (frontend) & Heroku (backend) deployment
- MVC (Model-View-Controller) backend structure
- Build real-world full-stack projects
- Strong GitHub portfolio development

YOUTUBE

- HTML, CSS, JavaScript fundamentals
- ReactJS UI development (components & hooks)
- Redux + Redux Thunk for state management
- Axios for API communication
- Node.js & Express.js backend development
- MongoDB + Mongoose CRUD operations
- JWT-based authentication
- File upload & display functionality
- Cloud basics for database deployment
- Full-stack GitHub portfolio building
- Essential Git & version control
- Cloudinary / AWS S3
- Netlify frontend deployment
- Heroku backend deployment
- Google Sign-In integration (Auth API)
- React Router for navigation
- TypeScript basics
- Express middleware architecture
- Docker basics for containerization

TWITTER

- HTML, CSS & JavaScript fundamentals
- ReactJS for dynamic UIs
- Material UI for modern interfaces
- Axios for API communication
- Image upload & hosting
- Node.js & Express.js backend
- Full MERN stack development
- MongoDB CRUD operations
- Server-side file upload handling
- CORS understanding & implementation
- Cloud-based database deployment
- Full-stack GitHub portfolio building
- React Query
- Essential Git version control
- MVC architecture
- Firebase frontend hosting
- Docker basics for containerized development
- Heroku backend deployment
- Google Sign-In integration

INTERNSHALA

- HTML, CSS & JavaScript fundamentals
- ReactJS for dynamic UIs
- Material UI for modern interfaces
- Real-world project workflow
- Firebase authentication
- Tailwind CSS responsive UI
- Full MERN stack development
- Modern rapid-build techniques
- Live project deployment skills
- Secure Firebase login
- Dynamic internship listings
- Scalable MongoDB data handling
- Tailwind-based responsive design
- JWT & refresh tokens for robust authentication
- API testing with Thunder Client
- Smooth navigation with Bootstrap icons
- Advanced Node.js functionality
- React component routing
- Efficient Express middleware
- Full CRUD data operations

REDBUS

- MEAN stack mastery (MongoDB, Express, Angular, Node.js)
- Angular Material & responsive UI design
- TypeScript & component-based architecture
- Node.js + Express backend APIs
- RESTful API design & integration
- MongoDB CRUD, schema modeling & indexing
- JWT + Passport.js authentication
- Scalable, mobile-friendly architecture
- Git-based collaboration & workflow
- RxJS for advanced Angular state handling
- Angular Routing & Lazy Loading
- Interceptors for secure API communication
- Thunder Client for API testing
- Mongoose validation & middleware
- Cloud deployment (Render / Railway/ Vercel)
- Docker basics for containerized development

BOOK MY SHOW

- Django framework mastery (models, views, templates, URLs)
- Secure user authentication & role-based access
- Responsive UI with Bootstrap
- Celery + Redis
- Database design using Django ORM
- Unit testing with PyTest
- Efficient content management via Django Admin
- Form handling, validation & error management
- Best practices for scalable project structure
- Smooth Django + Bootstrap integration
- Class-Based Views (CBVs)
- Django REST Framework (DRF) APIs
- Pagination, filtering & search
- NGINX + Gunicorn deployment
- Middleware for security & logging
- Deployment basics (Render / Railway / PythonAnywhere)
- Environment variables & settings management

MAKE MY TRIP

- Build a full-stack travel booking system with Spring Boot, MongoDB & Next.js
- Design secure RESTful APIs with authentication & authorization
- Create a modern, responsive Next.js frontend with smooth navigation
- Implement hotel & flight booking (search, filter, book)
- Develop an admin panel for managing hotels, flights, bookings & users
- Apply performance optimization across backend, database & frontend
- Deploy the complete app on a cloud platform for real-world use
- Use Spring Security + JWT/ OAuth2 for robust auth & role-based access
- Leverage Spring Data
- MongoDB with pagination & indexing

JIRA - SAAS

- Full-stack task & project management SaaS
- Next.js frontend with SSR & optimized rendering
- Component-based UI with dynamic routing
- State management using Redux / Context API
- Spring Boot backend with RESTful APIs
- JWT authentication & role-based access control
- Kanban boards (To-Do, In Progress, Done)
- Task creation, assignment & progress tracking
- Real-time updates with WebSockets
- API communication using Axios / FetchT
- Git & GitHub for version control
- Docker basics for containerized deployment
- Cloud deployment (AWS / Vercel / Render)

Learn to build real time project like myntra – React Native

- Expo project setup
- React Native UI components
- Tailwind / StyleSheet styling
- React Navigation (Stack, Tab, Drawer)
- Context API / Redux state management
- Redux Toolkit (advanced state handling)
- Axios for API calls
- AsyncStorage for secure local storage
- Mobile UI/UX design (e-commerce layout)
- Form handling with React Hook Form
- Image picking & uploading (Expo ImagePicker)
- Push Notifications (Expo Notifications)
- API caching & queries with React Query
- Responsive layouts with Dimensions & SafeAreaView
- Performance optimization (memo, FlatList optimization)

CARS 24

- Next.js + .NET + MongoDB
DTOs, automapper & layered architecture
- .NET Middleware for security, logging & error handling
- Authentication & authorization (JWT, role-based access)
- MongoDB aggregation pipelines
- .NET Web API
- MongoDB database (schemas, queries, indexing)
Appointment booking logic & scheduling
- File upload handling (images, listings)
- End-to-end testing
Docker containerization for full-stack apps
- Client-side state management
- Next.js server actions / API routes
- API integration & data fetching
Cloud deployment
